

# RFID SHIELDED

The wallet contains an exclusive Vault RFID shielding material in the wallet lining, such that when closed, the contents are entirely protected against unscrupulous digital pick pockets trying to "Skim" your data. It prevents digital ID Theft from pick pockets that now can reportedly steal data from up to 30 feet away without physically touching your wallet.

~ Laboratory tested and FIPS 201 approved ~

This RFID Blocking Wallet thwarts this with a three layered electronic shield built directly into the wallet lining. This shield has been laboratory tested and FIPS 201 approved.

**WARNING:** Be sure and remove your wallet - even if it is entirely empty - before proceeding through any security monitoring system. The shielding material will immediately trigger the alarms found in a metal detecting device.

Travel with confidence and know that your data is secure.
